

HOW_TO_FORK.md // How to steal this universe

You don't need to understand the whole project. You just need 80 lines.

This is not a template. It's a nervous system. Fork it, delete my thoughts, keep the physics.

The 3 things worth stealing

1. The memory trail (1 line)

In your canvas loop, stop clearing. Fade.

js

```
1 // replace ctx.clearRect
1 ctx.fillStyle = 'rgba(3,3,3,0.22)';
1 ctx.fillRect(0,0,width,height);
```

0.05 = dreamy. 0.35 = sharp.

2. The ORO-CORE pattern (your new state manager)

js

```
1 const CORE = { id: 0, x: width/2, y: height/2, radius: 14 };
1 let nodes = [CORE];
1 let synapses = [];
1 let particles = [];
1
1 function spawnNode(label, type='thought') {
1   const node = {
1     label, type,
1     x: CORE.x + (Math.random()-0.5)*200,
1     y: CORE.y + (Math.random()-0.5)*200,
```

```

1    vx: (Math.random()-0.5)*1.5,
1    vy: (Math.random()-0.5)*1.5,
1    radius: 5
1  };
1  nodes.push(node);
1  // auto-link to core + nearest neighbor
1  synapses.push({from:0, to:nodes.length-1});
1  return node;
1  }

```

3. The lang="all" parser

Don't validate input. Instantiate it.

js

```

1  // instead of if(input.length < 3) error...
1  function onSubmit(input) {
1    spawnNode(input);
1    localStorage.setItem('my-universe', JSON.stringify({nodes, synapses
1  }

```

The animate() loop that matters

This is the entire universe. Fork it and check it.

js

```

1  function animate() {
1    ctx.fillStyle = 'rgba(3,3,3,0.22)'; // 1. memory
1    ctx.fillRect(0,0,width,height);
1
1    synapses.forEach(s => { // 2. relationships
1      ctx.beginPath();
1      ctx.moveTo(nodes[s.from].x, nodes[s.from].y);
1      ctx.lineTo(nodes[s.to].x, nodes[s.to].y);
1      ctx.stroke();
1    });
1

```

```
1  nodes.forEach(n => { // 3. thoughts drift
1    n.x += n.vx; n.y += n.vy;
1    ctx.beginPath();
1    ctx.arc(n.x, n.y, n.radius, 0, Math.PI*2);
1    ctx.fill();
1  });
1
1  requestAnimationFrame(animate); // 4. infinity
1 }
```

3 instant remixes

Turn it into a todo app: `spawnNode("buy milk")` where `type='todo'` is red and `type='done'` is green.

Turn it into a bug tracker: `spawnNode("login broken")` auto-links to `spawnNode("auth service")` because they share semantic family.

Turn it into a team memory: Add `WebRTC` or `CRDTs` to sync `nodes` across browsers. 10 people injecting into one ORO-CORE.

You don't need to ask permission. `<!DOCTYPE Oroboro>` means you are now rendering a universe, not a document.

`lang="all"`
